Creating React Project Template

In this lesson, we'll design a table to organize our **todo** tasks.

Starting with the paragraph tag we previously added, which reads "we made our first React application," let's delete it. Simultaneously, we'll remove the `className="App"` from the encompassing div.

Our next step is to nest a new div inside our current one. Inside this newly created div, let's add the heading "Your To-Dos." After that, we'll initiate another div where our table will reside.

Now, let's structure the table. Begin with the `<table>` element. Directly beneath it, define the table headers using `<thead>`. Within this `<thead>`, add a table row `<tr>`. For our table's column headers, insert three `<th>` elements with a `scope` attribute set to "col". These headers will represent:

```
Description

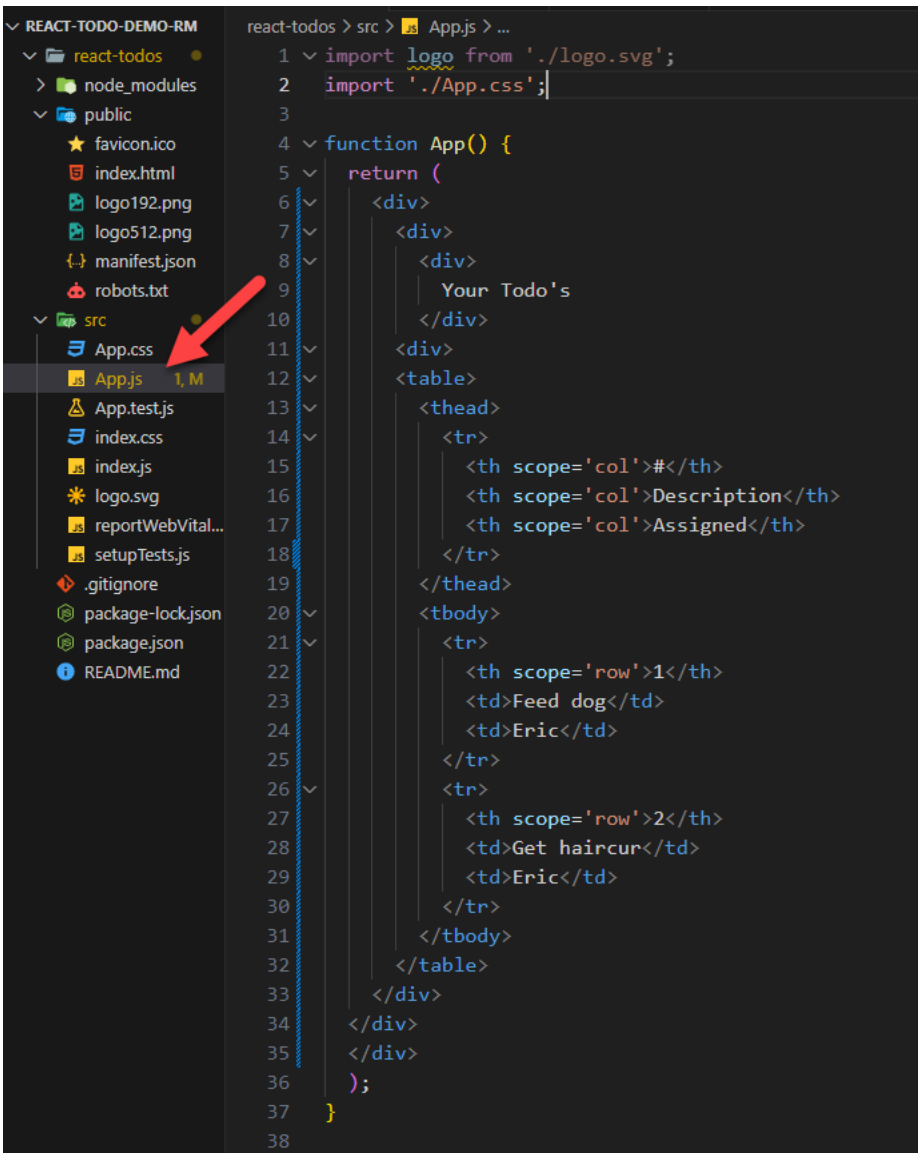

Assigned To
```

Exiting the `<thead>`, let's construct the table body with the `<tbody>` element. Inside this section, define the data rows using `<tr>`. The first row should have:

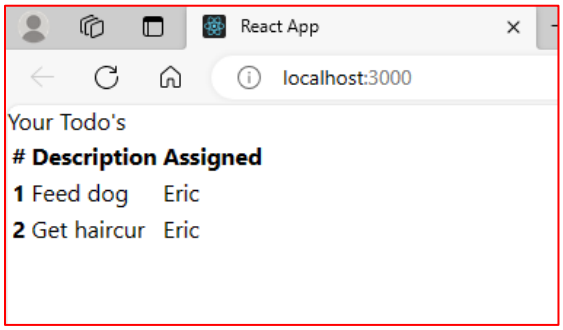

- A `<th>` element with a `scope` attribute set to "row" and content "1".
- A `<td>` for the task description, which reads "Feed dog."
- Another `<td>` for the assignee, which reads "Eric."

For our demonstration, we'll also insert a second row:

- `<th>` with `scope` set to "row" and content "2".
- `<td>` with the task "Get a haircut."
- A final `<td>` specifying the assignee, again, "Eric."

Upon saving these changes, React will recompile the application automatically. Navigating back to our web browser, we can now see our neatly organized to-do table. This showcases tasks along with their ID numbers and assigned personnel.

Just to recap, within our app, we've added layered div elements with the outermost one housing our table structure. This table comprises a header indicating column names and a body where specific to-do tasks are outlined. Each row signifies a distinct task with its corresponding ID, description, and assignee.

For this lesson, our focus was solely on laying out the table's template. We'll dive deeper in subsequent lessons.
