Creating a python project

- ▶ Now, hit OK and you are ready to make your first project! Click to open a new project.
- ▶ It is better to set up a new virtual environment, for every new project you work on. This will make sure that different project are isolated in their own environment so that they do not interfere with each other and cause failures:

Community edition

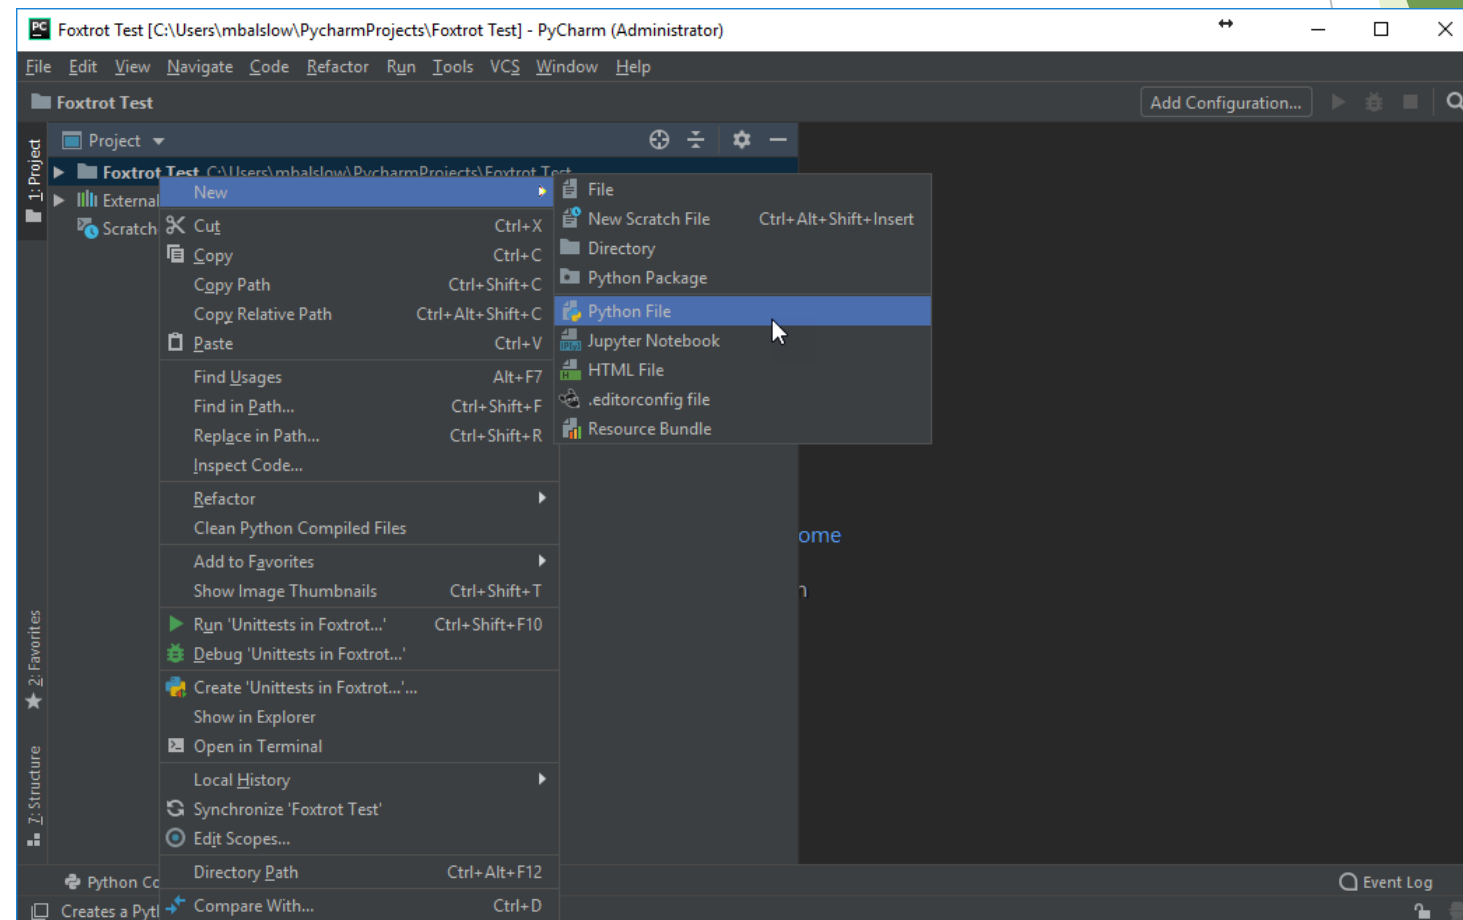

Professional edition

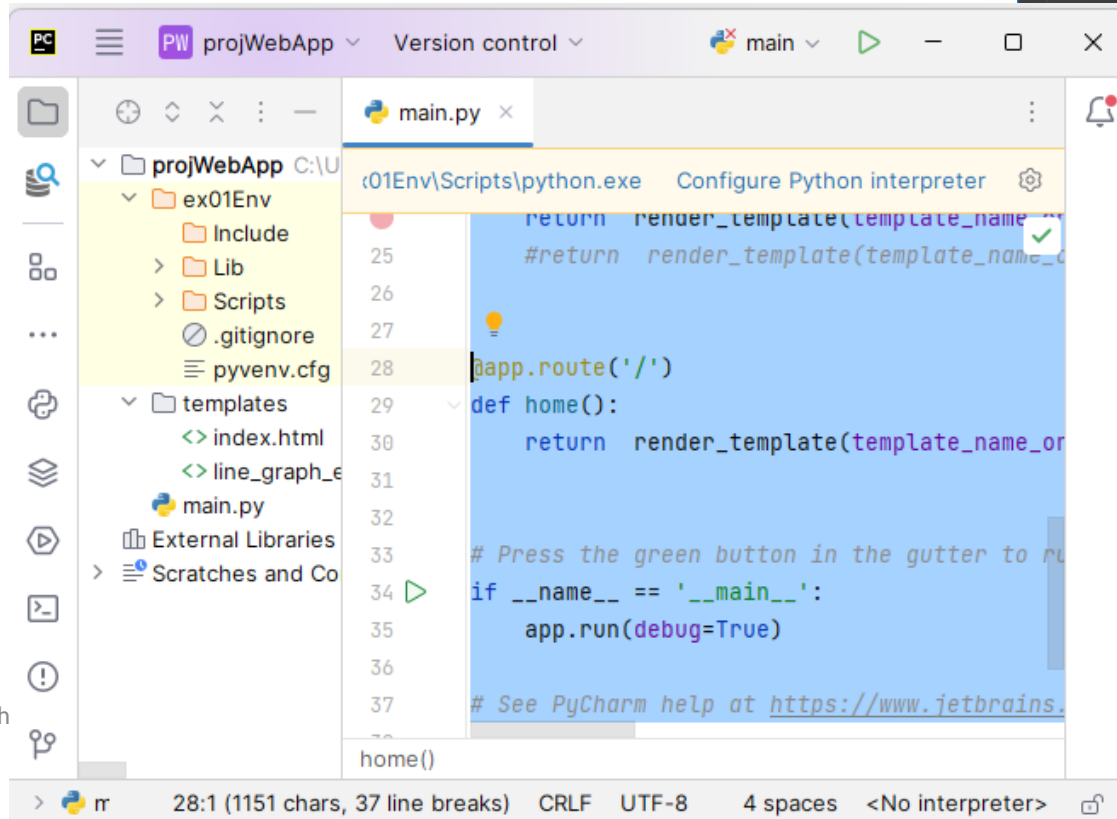

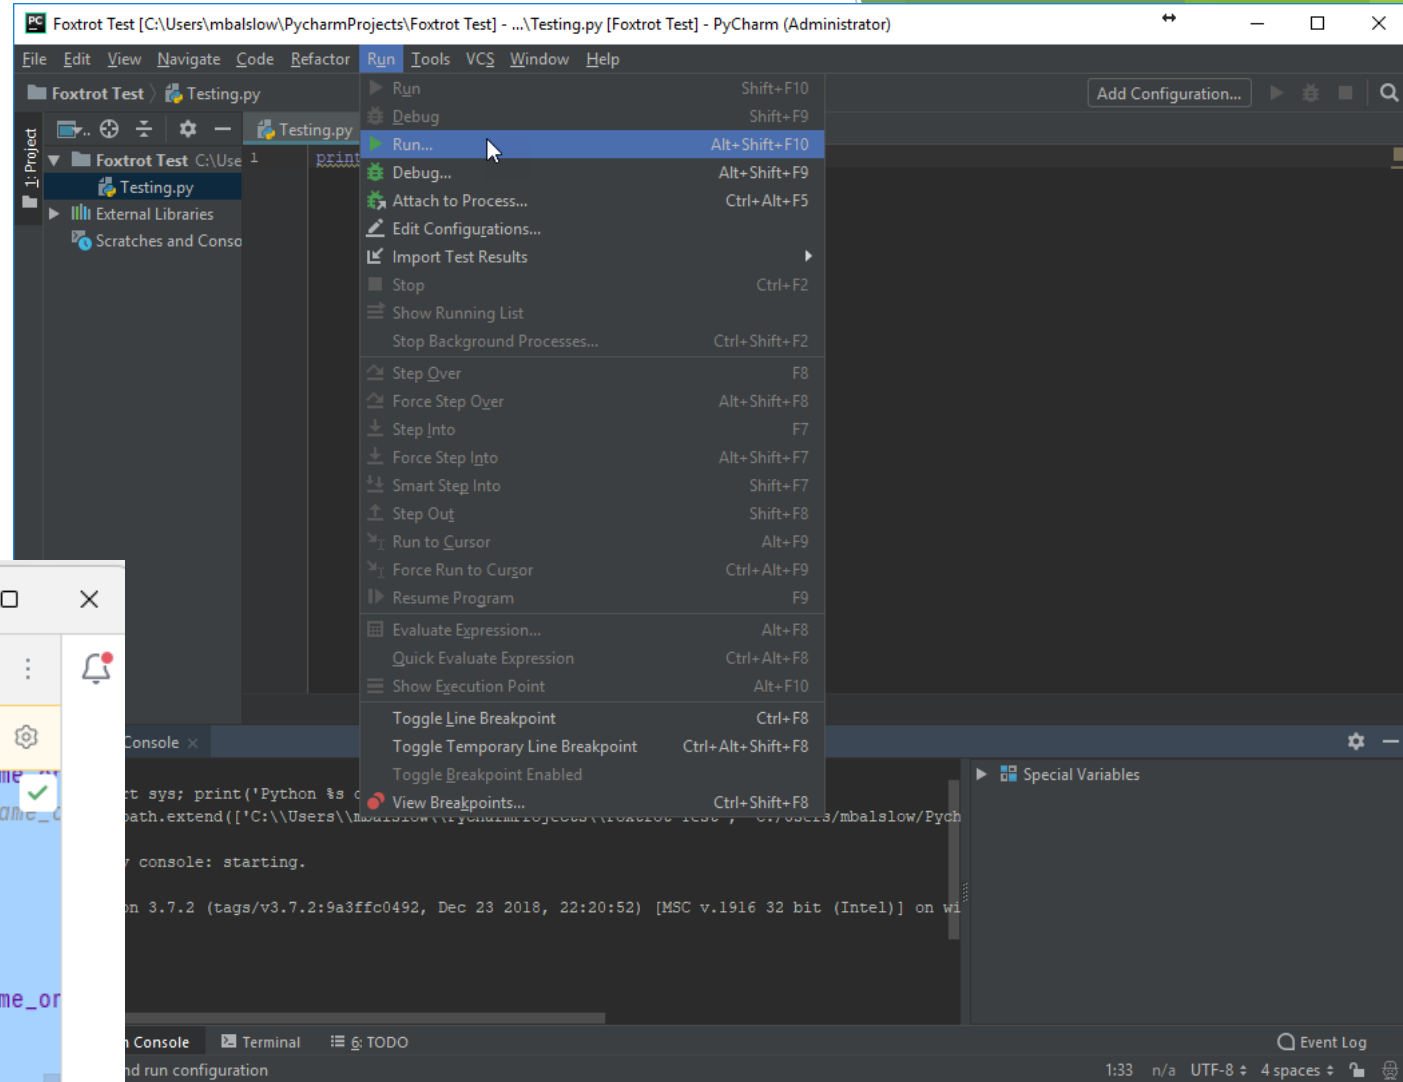

Create a new Python file

- ▶ To get started in your new project, right-click on your project folder to create a new Python file:
- ▶ Then add code.

Execution

- ▶ Right click on file and select run.

Test this code

- ▶ Open “notpad” App.
- ▶ Copy and paste the code here into notepad.
- ▶ Copy from Notepad and paste into a python file in PyCharm. You can use the main.py file if you created one.
- ▶ Execute the code.
- ▶ Good luck coding
- ▶ Happy python coding.

```
#!/usr/bin/env python3
def welcome_banner():
    art = r"""
```

```

\ \ / / _ | | _ | _ | _ | _ | _ | _ | _ | _ | _ |
 \ v v / _ | | _ | _ | _ | _ | _ | _ | _ | _ | _ |
 \_/ \_/ \_ | | _ | _ | _ | _ | _ | _ | _ | _ | _ |
```

```
